DEFENSE LOGISTICS AGENCY-ENERGY BULK FUELS TRAINING

INTEGRATING EXPERTISE WITH THE LEARNING OF SCIENCE TO DELIVER LOGISTICS TRAINING

ECS supports the Defense Logistics Agency-Energy (DLA-E) by providing Instructors, Subject Matter Experts (SMEs) and instructional science expertise to support the analysis, design, development, implementation, and evaluation of several key DLA-E initiatives and curriculums related to training and enhancing supply chain personnel technical skills.

Our team worked closely with experienced petroleum SMEs to design, develop, and deliver the in-residence Joint Petroleum Course (JPC) and to conduct a supply-chain training needs assessment. Our instructors and SMEs have extensive experience in energy, fuels, logistics operations, and policy, along with vast knowledge of instructional design, courseware development, and the science of learning.

The team delivered additional courses during subsequent option years that included two other courses. The team delivered a course on Joint Petroleum Advanced Planning and an immersive Bulk Petroleum Storage Operator's Refresher Course simulation. Both courses are targeted for experienced Bulk Fuels professionals across the DoD.

Achievements & Expertise

- Supply-Chain Training Assessment
- In-Residence Joint Petroleum Course
- Bulk Petroleum Storage Operator's Refresher Course
- DLA-E DESC Capstone Exercise Sim
- Joint Petroleum Advanced Planning Course
- Course successfully completed ACE Learning Evaluation
